

# ePrescribing Tips

## It's the Responsibility of the Practice to Ensure the ePrescribing Module is Updated

### Ask Your EHR Vendor ...

- If you are fully electronically enabled. If a pharmacy believes you are able to receive electronic communications they will attempt to contact you in this manner and reduce calls to your practice.
- To review the electronic communication function and schedule a refresher training in the eRx module to identify short cuts and reduce clicks.
- About eRx Cancel, an emerging feature which allows for the electronic cancellation of prescriptions.

## Inform Your Patients

- Prescriptions that require a pre-authorization (ex. Controlled substances) will usually incur additional wait time until approval has been received, please notify patients at the point of care.
- Verify the name and location of the patient's preferred pharmacy. Prescribing to the incorrect pharmacy can lead to reduced medication compliance.

## Pharmacy Exception Request (PER)

- For non-formulary pharmaceuticals, follow the PERs submission guidelines.

## Stay Informed

- Request update notifications from your EHR vendor to ensure the latest functionality.
